1. Button Diagram

2. Installation

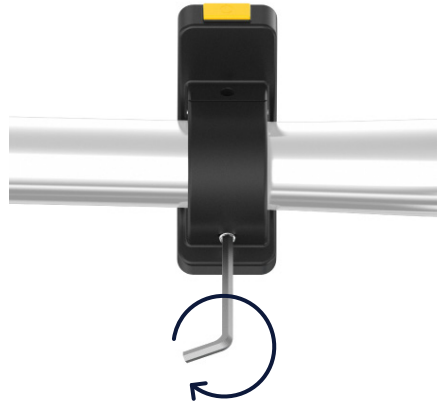

- 1.1 To fit the OLED display, open up the clasp and fit it around your handlebars.

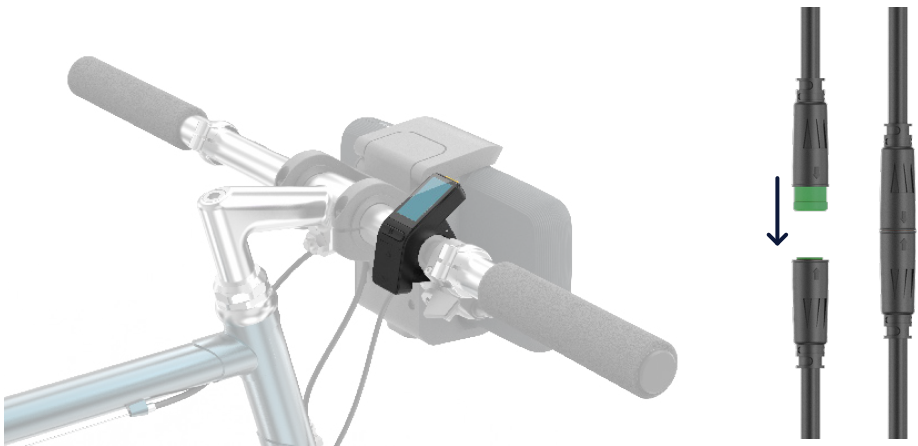

- 1.2 Tighten the screw on the back of the display using a 2.5mm Allen key.

Check your brakes and gear shifters work as normal.

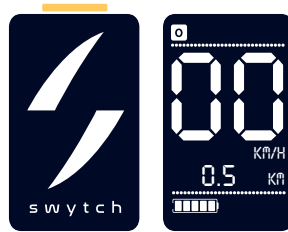

- 1.3 Connect the green power cable into the green cable coming out from the mount.

3. Display Settings

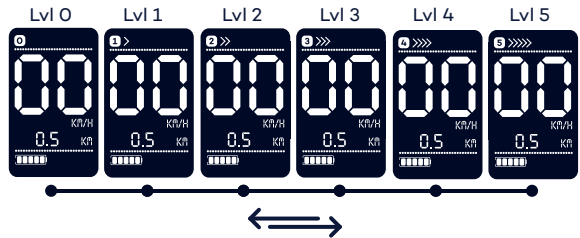

1. Power on/off

Press and hold the yellow power button located on the top of the display for **two seconds**, until the Swytch logo appears.

2. Change power level

Short press the up or down button.

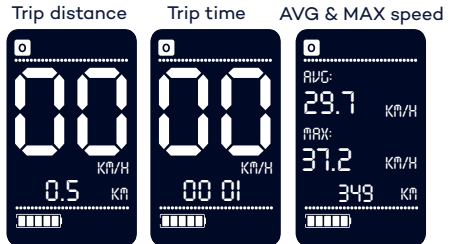

3. Trip info

There are three separate screens for trip info, **short press** 'M' to swap screens.

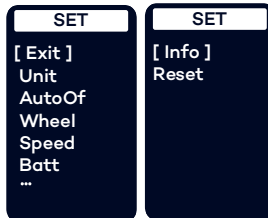

- Trip distance
- Trip time
- Average and max speed

Press and hold 'M' for the option to clean trip data.

4. Open settings menu

Within the first ten seconds of turning the display on, **press and hold** the 'M' button. Once the menu pops up, **short press** the up or down buttons to navigate and **short press** 'M' to select an option.

Settings Menu

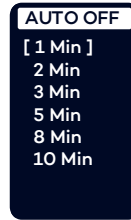

Unit

Toggle between metric and imperial units using the up and down buttons. **Short press** the up or down buttons to navigate and **short press 'M'** to confirm your selection.

Auto off

Adjust the length of time before your display automatically powers off when not in use. **Short press 'M'** to confirm your selection. **Short press** the up or down buttons to navigate and **short press 'M'** to confirm your selection.
